Basic Operation

1. Installation

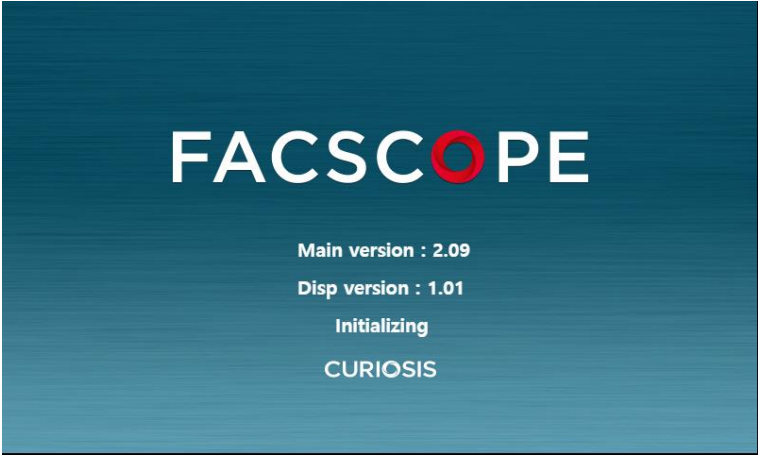

Step 1. Remove the product from the box.

Step 2. Connect the power cable.

Step 3. Turn on the device.

2. Power up

Initializing

Home screen
(Slide holder is automatically ejected.)

3. Sample preparation

Step 1. Prepare cell suspension, trypan blue, micro tube and C-slide.

Step 2. Place **at least 20 μL of trypan blue** in the micro tube and add **an equal volume of the cell suspension**.

Step 3. Mix the sample in the micro tube by pipetting the vial 3~5 times gently.

Step 4. Load **20 μL** of the stained cell sample onto each channel of C-slide.

- ! ✓ Whole procedure should be done in clean area to avoid to decrease accuracy of counting due to dust.
- ✓ Before sampling the cell suspension, gently resuspend the cells at least 6 times.
(Pay attention to avoid bubbles and check if there are any cell clumps or agglomerates.)
- ✓ The sampling should be in the middle of cell suspension, not on the surface or the bottom.
- ✓ When load the cell onto slide, ensure that bubbles should not be entered to the channel.

4. Start Counting _ Quick start

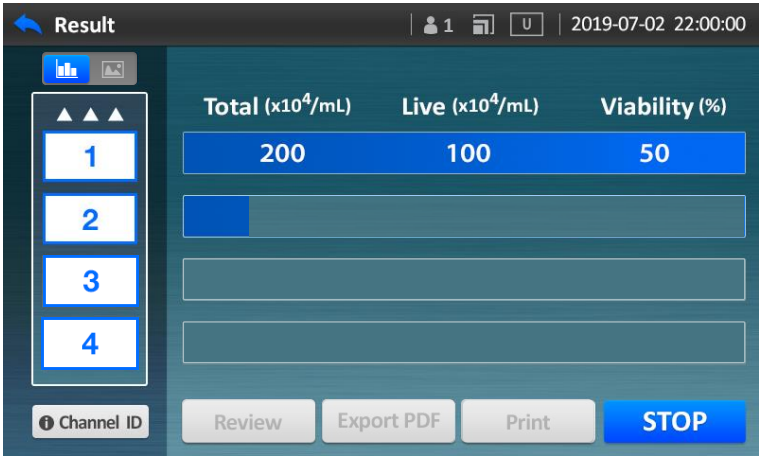

Home screen

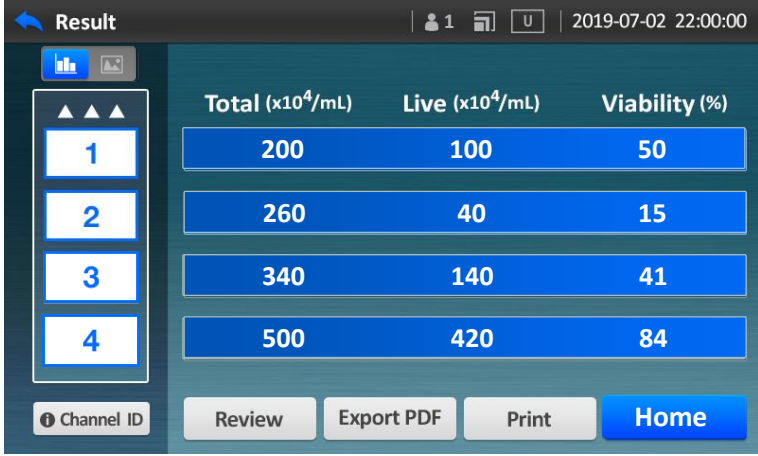

Load a slide.

Press **Start** button.

Counting

Completion
